

# STORY: THE FOGGY DAY

Ioana Cristescu, Ana Ghimes

## *The foggy day in Romania*

In the first week of January 2023, I was on a holiday in Austria.

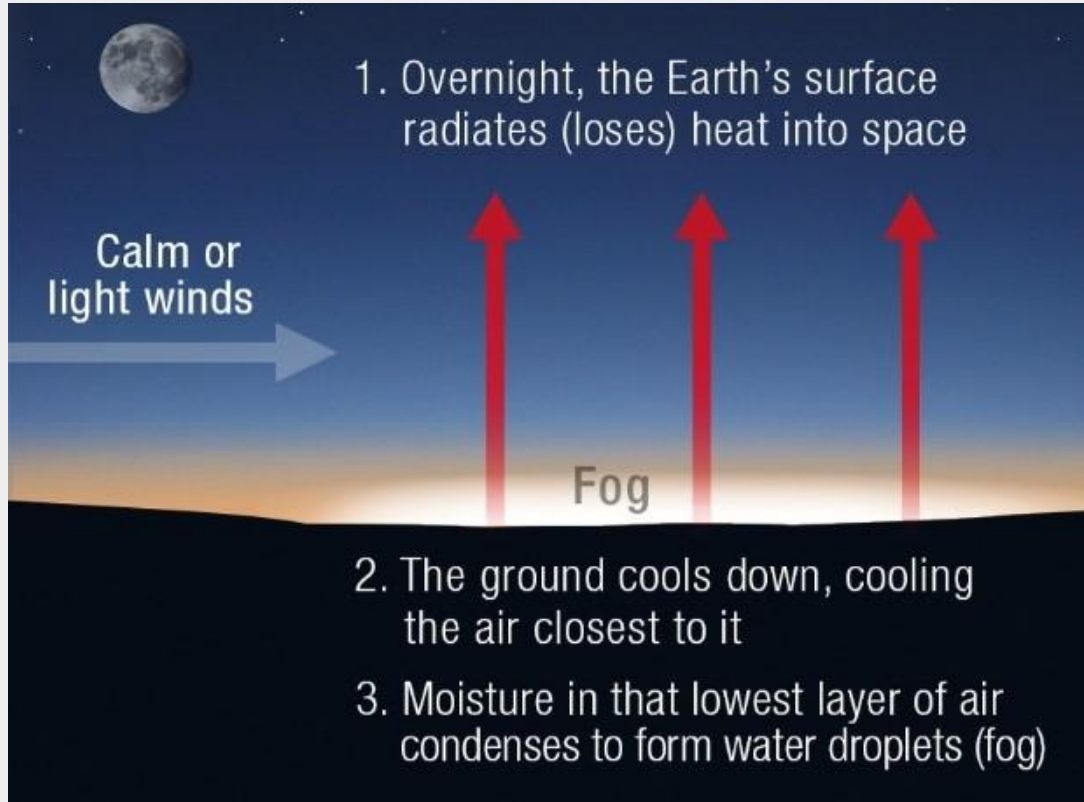

When I came back in Romania there was fog everywhere you couldn't see the car in front of you.

Fog shows up when water vapor or water in its gaseous form, condenses.

It was a dangerous road and a really long one. But at the same time it was interesting because it looked like you were in a cloud.

# How fog is formed?

During condensation, molecules of water vapor combine to make tiny liquid water drops that hang in the air. You can see fog because of these tiny water droplets. Water vapor, a gas, is invisible.
