

My proposal for the headmaster

*"Harmony with nature,
Excellence in education."*

- Gonzalo Puig Burillo -

more solar pannels

Taking advantage of renewable energy sources is essential.
By installing more solar panels in our school, we will be able to avoid using scarce energy sources.

Recycling point

Many students have equipment, appliances, or furniture that they don't use anymore.

These items can be recycled into new ones, but many students don't know what to do with them or don't want to take the time to find out.

For this reason, it would be much easier if the school had a recycling point where students could recycle these items.

Vegetable patch

It would be very interesting for young students to have one lesson a week about plants and flowers.

There, they could learn how to take care of plants and learn information about its growth and characteristics.

It would be very interesting for young students to have one lesson a week about plants and flowers.

There, they could learn how to take care of plants and learn information about its growth and characteristics.

Go on bicycle rides

This initiative can promote the use of bicycles and can make students discover cycling.

After that, young people can be motivated to use bicycles for other purposes, such as going to school, and stop using motorbikes.

Contests and competitions

Competitions can make young people learn a lot about environmental education.

For example, if the competition is about having the most beautiful vegetable patch, they will get to know a lot about gardening and horticulture.

THANKS!
