

The page is decorated with watercolor-style illustrations of various green plants and flowers. On the left side, there are clusters of small, light pink flowers with dark centers, and several types of green leaves, including some with rounded shapes and others with pointed tips. On the right side, there are more green leaves, including a prominent fern frond with multiple leaflets, and some larger, broad green leaves. The overall aesthetic is soft and naturalistic.

Proposal for the headmaster.

"Together for a greener school, a greener world."

Rubén García Villo Ido

01 Cleaner spaces.

We should invest more money in the school's cleaning services and, more importantly, promote the maintenance and cleanliness of our green spaces among students.

02 Eco-gardens.

There's plenty of spare land in our school, which is only occasionally used by the students for exercise. It would be a nice idea to make the most of this space by creating a student-run eco-garden, where we could even grow our own vegetables.

03 Talks and workshops on nature-related

issues. The school should offer more talks on issues like global warming. It would also help to get influential people to give these talks, so that students can become aware of the problems they'll be facing in the future.

04 Electric charging stations.

The school could provide charging points for teachers' hybrid or electric cars, so that they can use electricity rather than petrol to drive to school and recharge.

05

Eco-

competitions.

It would be great to organise competitions for students to come up with eco-ideas for the school's environmental projects. This would give us even more ideas on how to make the school greener!
